

Emmanuel Onyekachi

Front End Web Developer

Lagos, Nigeria | emmanuelymb@gmail.com | [WhatsApp](#) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Frontend developer building modern, fully responsive, high-performance web experiences with HTML, CSS, and JavaScript. Engineering background trained in systems thinking; now applied to clean architecture, refined motion, and disciplined UI craft. Currently expanding into React, Tailwind, Sass, and Next.js.

SKILLS

Languages HTML5, CSS3, JavaScript (ES6+)

Currently learning React, Tailwind CSS, Sass / SCSS, Next.js, Git & GitHub

Engineering Responsive design, performance optimization, semantic SEO, accessibility (WCAG-aware), Open Graph & structured data

Tools & workflow VS Code, Git, GitHub Pages, browser DevTools, Figma (basic)

Working toward Backend development, authentication & data, full-stack delivery

SELECTED PROJECTS

Lumière — Two-Michelin-Star Brand World

Self-initiated · 2026

Live: emmanuelonyeka.github.io/lumiere-restaurant Code: github.com/emmanuelonyeka/lumiere-restaurant

- Designed and built a complete fictional brand simulation of a two-Michelin-star Paris restaurant — three full pages (home, reservation, legal), eight filterable menu categories, three signature experience tiers, and a complete editorial story.
- Architected a backendless reservation system: a pure-JavaScript state machine with availability rules in a config object that mimics what a real restaurant manager would enter (opening hours, table sizes, time slots, blackout dates). Spent 48+ hours mapping logic on paper before writing any code.
- Implemented deep-link routing between the homepage's experience tiers and the reservation page using URL parameters (e.g., `?experience=tasting#booking`) so users land pre-routed to the correct flow.

Tech: HTML5, CSS3, JavaScript, multi-page architecture, custom animations, full SEO & Open Graph

PrimeNest Realty — Luxury Property Platform

Self-initiated · In progress

- High-end real estate interface targeted at the Nigerian luxury property market. Three-tab search system (Buy / Rent / Short Let) with context-aware filters, designed to feel like a concierge rather than a tax form.
- Built around confident editorial hierarchy and a navy-and-gold palette chosen for trust and longevity over trend. Featured properties presented as editorial cards rather than dense grids to maintain the premium tone.

Tech: HTML5, CSS3, JavaScript, responsive grid system, custom UI components

Personal Portfolio Site

Self-initiated · 2026

Live: emmanuelonyekachi.com Code: github.com/emmanuelonyeka/portfolio

- Single-page portfolio engineered for performance and accessibility: full SEO and Open Graph metadata, JSON-LD Person schema, WCAG-aware focus states, ARIA dialog modals, and reduced-motion support.
- Custom IntersectionObserver reveal animations, throttled scroll handling via requestAnimationFrame, and structured CSS using design tokens for color, spacing, and motion.

EDUCATION

B.Eng., Materials and Metallurgical Engineering

Nigeria

Engineering training in systems thinking and structural analysis — a discipline now applied to the way I architect interfaces and reason about scalability.
